“Becoming EnviroStars certified shows the public that we are doing our part to help protect the environment we all live in. No matter how large or small we can all do our part.”

*Dan Anders
Service Director*

Congratulations to Parr Ford Mazda for earning a **4 star** rating as an EnviroStars business. The EnviroStars program recognizes businesses that properly manage and reduce hazardous waste.

The service department at Parr Ford is proud of the steps they’ve taken in their new facility to ensure that hazardous waste is stored, handled and disposed of properly.

The shop uses a two stage parts washing system that recycles the solvent. They schedule on site solvent recycling to fit volume rather than frequency to maximum the amount of solvent being recycled. Antifreeze, used oil, batteries, and scrap metal are recycled. Fluorescent lights are collected and are picked up by a waste service to keep them out of the regular garbage.

To prevent and contain spills the shop uses secondary containment as well as funnels for transferring liquids. Spill absorbent material is available throughout the shop.

Waste materials are kept in compatible containers, properly labeled to prevent improper mixing and kept closed as required.

The staff at Parr Ford Mazda are provided with opportunities to learn about and discuss hazardous waste issues during routine meetings. This is another important element to ensure that all waste continues to be managed correctly.
